

## A HOLIDAY RESPECTING NATURE

The Tarvisio area is an area rich in biodiversity with the variety of natural areas present within it, where numerous animal species find a home. Help us to preserve this natural wealth with your responsible behaviour.

- **Respect for the environment**
  - Use public transport or a carpool to reach your destination.
  - Only light fires in designated areas and make sure you do not leave embers behind when you leave.
  - Take your waste, including organic waste, back to the valley to avoid polluting the environment and creating feeding points.
  - Limit your water consumption, especially in areas where water is scarce
  
- **Respect for fauna**
  - Do not feed wild and/or grazing animals
  - Keep a safe distance from animals by trying not to leave the trail
  - Respect the tranquillity of the fauna by trying not to frighten the animals with shouting and noise
  - Keep your dog on a lead to avoid triggering defensive reactions from other animals but release it in the case of an imminent attack
  - Pay attention to threatening signals from animals: ducking, pawing, snorting.
  - When an animal approaches, remain calm, do not turn your back and move away slowly.
  - If you must approach, make yourself visible and do not look the animals in the eyes.
  - Do not pet animals, especially when they are eating
  - Stay away from puppies: mothers are very protective of them
  - Do not catch or kill animals or collect eggs or nests in the wild. Hunting is a strictly regulated activity and is subject to penalties
  - Wildlife species are not harvested, consumed, displayed, sold, or traded, except as part of a regulated activity that ensures that their utilization is sustainable and in compliance with local, national and international law
  
- **Respect for flora**
  - Do not pick flowers. In Friuli Venezia Giulia all spontaneous flora, including forest fruits, is protected to varying degrees. To avoid fines, leave the flowers on the ground
  - Mushrooms can only be picked if you have an authorisation
  - Stay on the path as much as possible to avoid damaging the plants
  - Do not make incisions in the bark, they cause serious damage and can lead to the death of the tree
